

Harry Duong

857-313-5067 | Boston, MA | duong.ng@northeastern.edu | [linkedin/in/harrydng](https://www.linkedin.com/in/harrydng) | [github/harrydng](https://github.com/harrydng) | [devpost/harrydng](https://devpost.com/harrydng)

EDUCATION

Northeastern University, Khoury College of Computer Sciences

Boston, MA

B.S. in Computer Science and Business Administration, GPA: 3.72

May 2027

Coursework: Software Engineering, Computer Systems, Network Fundamentals, Mobile Application Development, Data Structures and Algorithms, Object-Oriented Design, Database Design, Discrete Math, Statistics, Information Systems

Awards & Certifications: **Best AI Hack @ Finhacks 2025**, **Best Hack Overall @ Hackbeanpot 2025**, **Dean's List**

TECHNICAL SKILLS

Languages: Java, Python, SQL, TypeScript, JavaScript, C, Kotlin & XML, Assembly

Frontend: React, Next.js, React Native, Jetpack Compose, TailwindCSS, Ant Design

Backend: Spring Boot, Flask, RESTful APIs, Node.js

Database & Tools: MongoDB, MySQL, Snowflake, Firebase, AWS, Docker, Git, GitHub Actions, JUnit, Jira

PROFESSIONAL EXPERIENCE

Cybersecurity & Technology Risk Advisory Intern

June 2025 – August 2025

KPMG US

Boston, Massachusetts

- Led **15+ SOX tests and business process controls for 3 clients**; identified 3 control gaps, coordinated remediation with associates and clients, and closed issues by quarter-end through document validation
- Assessed **2 third-party applications and AWS cloud environments for a client** by conducting interviews, validating configurations, re-testing controls, and recommending compliance improvements

Software Engineer Intern

June 2024 – September 2024

FPT IS

Hanoi, Vietnam

- Redesigned MySQL data model and query execution path for a Spring Boot service, **adding indexing, query plan optimization, and connection pooling** to reduce p95 latency by 20% under production load
- Implemented **role-based admin and user dashboards in TypeScript, integrating RESTful services** for real-time availability search, transactional booking, and conflict resolution in a room-scheduling system
- Fixed **6 QA-reported defects** across front-end TypeScript and back-end Spring Boot services, addressing race conditions, state synchronization issues, and API contract mismatches to improve system reliability

PROJECTS

EarthBeats | *Next.js, Node.js, Python, Flask, Hume AI, MongoDB* | **Winner of Hackbeanpot 2025**

- Developed an **AI-powered road trip planner** optimizing routes to minimize carbon emissions, used **Google Maps API** for real-time routing and **Spotify API** for mood-based music matching using **Hume AI**
- Engineered a gamified reward system, allowing users to earn currency for eco-friendly choices, redeemable at partnered sustainable businesses, and see **real-time carbon footprint calculations**

Code2Date | *React, TypeScript, Node.js, MongoDB, REST APIs*

- Built a StackOverflow-style Q&A platform with a dating-inspired matching layer and group messaging, enabling users to ask and answer questions, vote, and discover compatible peers based on shared interests and activity
- Implemented core full-stack features and real-time interactions using **Websocket transmission** to support live updates, direct and group messaging

Nomsy | *Kotlin, MVVM, Jetpack Compose, PythonAnywhere, MealDB API, Spoonacular API*

- **Led a team of 4** and architected an Android application using MVVM, unidirectional data flow, and Room persistence to support offline-first meal logging, nutrition goal tracking, and region-based recipe discovery
- Integrated MealDB & Spoonacular APIs to enable recipe recommendations, food image calories classification, automated nutrition insights; tested using end-to-end, Jetpack Compose UI testing and JUnit4

Spendr | *React, Flask, MySQL, and Docker* | **Best AI Hack at FinHacks 2025**

- Developed a spending compatibility matchmaking system using LightFM collaborative filtering and a financial personality quiz to generate user scores; built REST APIs with Flask and containerized the app with Docker
- Designed and implemented a MySQL database schema to manage user profiles, matchmaking criteria, and financial records, and built 12 RESTful APIs with Flask for user authentication, data processing, and match retrieval
