EDUCATION

Northeastern University, Khoury College of Computer Sciences

Boston, Massachusetts

B.S. in Computer Science and Business Administration, GPA: 3.70

December 2026

- **Coursework:** Software Engineering, Computer Systems, Network Fundamentals, Mobile Application Development, Data Structures and Algorithms, Object-Oriented Design, Database Design, Discrete Math, Information Systems
- **Awards:** **Best AI Hack** – FinHacks 2025; **Best Hack Overall** – HackBeanpot 2025; **Dean's List**

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, Kotlin, Swift, Assembly

Frameworks: Spring Boot, React, Next.js, Flask, Node.js, Express

Cloud & Databases: MySQL, MongoDB, Snowflake, Room, PostgreSQL

Testing & Tools: Vite, Docker, JUnit, Cypress, Jest, ESLint, GitHub Actions, Git, Jira,

PROFESSIONAL EXPERIENCE

Cybersecurity & Technology Risk Advisory Intern

June 2025 – August 2025

KPMG US

Boston, Massachusetts

- Executed **20+ SOX and technology-control tests across three client** engagements, identified three control deficiencies, and coordinated evidence collection and remediation validation through quarter-end closure
- Assessed **two third-party applications** and their AWS environments against client security policies by reviewing system configurations, controls, and evidence; documented gaps and recommended remediation

Software Engineering Co-op

January 2025 – June 2025

Snyk

Boston, Massachusetts

- Developed and launched an internal pricing application using React, Flask, and Snowflake for usage-based pricing model, supporting account executives and sales engineers across **50+ quarterly opportunities**
- Designed an **8-table Snowflake schema** and developed **10+ Flask REST endpoints** to ingest customer-usage data, execute pricing calculations, and serve results to a React application
- Automated a previously manual pricing workflow, reducing per-client turnaround from approximately **60 minutes to under 5 minutes**; validated output against existing Excel forecasting models before production release

Software Engineering Intern

June 2024 – September 2024

FPT IS

Hanoi, Vietnam

- Reduced p95 response latency by **20%** for a Spring Boot room-booking service by adding targeted MySQL indexes, improving inefficient query execution plans, and tuning database connection pooling in production
- Built role-based TypeScript dashboards and enforced admin/user permissions through Spring Boot APIs for availability search, transactional booking, and scheduling-conflict validation
- Resolved **six QA-reported defects** across TypeScript and Spring Boot services, including duplicate-booking race conditions, stale frontend state, and request/response contract mismatches

PROJECTS

EarthBeats | *Next.js, Node.js, Python, Flask, Hume AI, MongoDB* | **Winner of HackBeanpot 2025**

- Built a road trip companion app with a Flask service exposing **10 REST endpoints**, combining Google Maps route data with vehicle-emission calculations and returning results to a Next.js client in **under 2 seconds end-to-end**
- Integrated Spotify and Hume AI to generate mood-based playlists for planned routes, handling auth and response normalization across both APIs; won 1st place among 200+ teams at Hackbeanpot 2025

Code2Date | *React, TypeScript, Node.js, MongoDB, REST APIs*

- Designed and implemented a user-matching algorithm, group chat, and content moderation system for a Q&A platform with dating-app-style matching in 1 month **Agile sprints, seeded and tested against 100 mock users**
- Implemented compatibility scoring across **10 screens** by combining skill/interest, reputation similarity, and activity recency into a weighted match score; built real-time messaging via WebSockets to broadcast updates to clients

Nomsy | *Kotlin, MVVM, Jetpack Compose, PythonAnywhere, MealDB API, Spoonacular API*

- Led a team of 4 across 3 sprints over 5 weeks to architect an offline-first Android Workout App (**4 screens, 8 core features**) using **MVVM, unidirectional data flow, and Room persistence**
- Integrated MealDB and Spoonacular APIs to power recipe recommendations, calorie estimates, and nutrition insights (**avg. response time 1s**); **achieved 100% test coverage** with JUnit4 and Compose UI tests
